- b. AllowAnonymous
- c. ApiController
- d. Identity

23. All properties of claim Class are

- a. Read-only

Which one is Entity Framework installation command?    Ans: pm> install – package Entityframework page-17

2. On model class/Dbset class which property converted to database primary field automatically

Ans: ID    page-19

3. Why we declare a property virtual    Ans: For getting lazy loading navigation facilities. page-19

4. Why navigation properties will be collection type such ICollection

Ans: Because it can take multiple entity one to many relation. page-19

5. After declare a property in a class why we use '?' mark    Ans: That mean property is nullable. page-20

6. which property can specify entity set    Ans: DbSet page-22

7. Which one is corresponds with Database table?    Ans: Entity set page-22

8. Which one is corresponds with Database table row?    Ans: Entity page-22

9. Where we define connection string name in context class?    Ans: On Constructor. page-22

10. By default EF create table name plurize, how we can remove it/make single name Ans: Remove comment. page-22

11. Which method insert test data Ans: seed method page-23

12. How can I disable database inistization from web config? Ans: disable database inistization = true page-25

13. How can I disable database inistization from Application\_Start method in global.aspx(alternative of q12)

Ans: Database.SetInitializer page-25

14. If we want to create mdf/database in App\_Data folder then what will we deline in connection string?

Ans: AttachDBFilename =|DataDirectory| page-26

15. What thing specify by Default rought Ans: Controller/Action/id page-38

16. If we add[AntiForgeneToken] in a action method when what things we need to specify or related view page

Ans: Html.AntiForenToken page-42

17. Which command generate the Migration folder? Ans: Enable-Migrations page-94

18. Which command generate Configuration.cs file? Ans: Enable-Migrations page-94

19. Which one is more secure option in to bind data in action method(include, exclude)? Ans: include page-43

20. Which one is not Enitity state Ans: Update page-47

21. Which one is Entity framework default inhitentenc pattern? Ans: TPH page-251

22. Which inhitentence pattern create complex query Ans: TPT page-251

23. Which inhitentence do better performance? Ans: TPH page-251

24. In EF Linq how can I write direct SQL query? Ans: Database.SqlQuery() page-263, 264

25. In EF Linq how can I write direct Non SQL query  
comment(insert/update/delete)

Ans: Database.ExecuteSqlCommand page-264

26. Which method return Entity type? Ans: DbSet.SqlQuery page-264

27. By default all entity query are chashed in memory. How to disable it? Ans:  
How to select AsNotTracking page-273

28. Test driven code writing easier in which framework(no need to write repository code) Ans: EF6 page-218

29. How to turn off auto driect change? Ans: AutodetectChangesEnabled page-286

30. How to turn off auto validation by which property? Ans:  
ValidateOnSeveEnabled page-286

31. For creating datamodel diagram in VS which addon you should use? Ans:  
Entity framework power tools page-286
